

Claims

1. A dressing product comprising:

- a dressing sheet, one first surface of which is provided with an adhesive, whereby said first surface defines an adhering surface for attaching the dressing sheet to an anatomical surface of a living being;
 - a carrier system defining a gripping section for handling of the carrier system by human fingers, the carrier system providing a support for the dressing sheet and at least a part of the carrier system is attached to the dressing sheet by means of said adhesive;
 - the dressing sheet being releasably connected to or contained in the carrier system,
- so that the carrier system can be separated from the dressing sheet during application thereof, wherein the carrier system comprises a supporting section and a protective sheet, said supporting section and protective sheet being adjoined along a curved or linear line, wherein the adhering surface of the dressing sheet defines an overlapping region in which the sheet adheres to the supporting section, and a non-overlapping region in which the sheet does not adhere to the supporting section.

2. A dressing product according to claim 1 wherein the supporting section and the protective sheet are adjoined along a fold line.

3. A dressing product according to claim 1 wherein the supporting section and the protective sheet are adjoined along an edge portion.

4. A dressing product according to any of the preceding claims wherein the supporting section is provided with a slit in the area being uncovered by the dressing sheet.

5. A dressing product according to claim 4 wherein the slit is substantially parallel to the adjoining line of the supporting section and the protective sheet.

6. A dressing product according to any of the preceding claims, wherein the carrier system defines an opening, through which a portion of the adhering surface of the dressing sheet is accessible, while the dressing sheet is connected to the carrier system.

7. A dressing product according to claim 6, wherein the opening is provided centrally over the dressing sheet.

8. A dressing product according to any of the preceding claims, wherein the gripping section extends away from the dressing sheet in a direction substantially parallel to the plane defined by the dressing sheet, the gripping section having a bending stiffness which is
5 sufficient to control application of the dressing sheet.

9. A dressing product according to any of the preceding claims, wherein the gripping section is arranged to extend beyond the bounds of the dressing sheet, and wherein, when seen in a plane view, that length of the gripping section which is beyond the bounds of the dressing
10 sheet is at least equal to the largest cross-sectional dimension of the dressing sheet.

10. A dressing product according to any of the preceding claims, wherein the surface area of the dressing sheet is less than 5 cm^2 , such as at most 4 cm^2 , such as at most 2 cm^2 , such as in the range of $1\text{-}2 \text{ cm}^2$.
15

11. A dressing product according to any of the preceding claims, wherein the line adjoining the protective sheet and the supporting section may be broken or separated when an operator applies a tension to the carrier system in the region of the line.

20 12. A dressing product according to any of claims 3-11, wherein the protective sheet is integral with the supporting section of the carrier system, the carrier system defining a weakened braking line at the transition between the supporting section and the protective sheet.

25 14. A dressing product according to any of the preceding claims, wherein the carrier system comprises a supporting sheet having a bending stiffness, which is greater than the bending stiffness of the dressing sheet.

30 15. A dressing product according to claim 14, wherein the supporting sheet is coated with a silicone material.

16. A dressing product according to any of the preceding claims, wherein the adhering layer comprises hydrocolloid particles.

17. A dressing product according to any of the preceding claims, wherein the thickness of the adhesive is 25-300 μm and the vapour permeability of the dressing sheet is 200-2000 g/m^2 .

5 18. A dressing product according to any of the preceding claims, wherein the adhesive is applied to a backing layer made from a polyurethane film.

19. A dressing product according to any of the preceding claims, wherein the adhering surface of the dressing sheet comprises a pharmaceutically active substance.

10

20. A dressing product comprising:

- a dressing sheet, one first surface of which is provided with an adhesive, whereby said first surface defines an adhering surface for attaching the dressing sheet to an anatomical surface of a living being;

15 - a carrier system defining a gripping section for handling of the carrier system by human fingers, the carrier system providing a support for the dressing sheet; wherein the carrier system defines a cavity for accommodating the dressing sheet.

20 21. A dressing product according to claim 20, further comprising a cover member for the cavity.

22. A dressing product comprising:

- a dressing sheet, one first surface of which is provided with an adhesive, whereby said first surface defines an adhering surface for attaching the dressing sheet to an anatomical surface of a living being;

25

- a carrier system defining a gripping section for handling of the carrier system by human fingers, the carrier system comprise a protective sheet providing a support for the dressing sheet; and wherein the carrier system comprises a thread arranged between said adhering surface of the dressing sheet and the protective sheet and extending beyond a bound of the dressing sheet.

30

23. A method of applying a dressing sheet of a dressing product according to any of claims 1-22 to an anatomical surface of a living being, the method comprising:

- separating the protective sheet from the adhering surface of the dressing sheet;

35 - attaching at least a portion of the adhering surface to said anatomical surface, and

subsequently

- separating the carrier system from the dressing sheet.

5 24. A method according to claim 23, comprising applying a pharmaceutical substance to the adhering surface of the through said opening portion of the protective sheet prior to separation of the protective sheet from the non-overlapping region of the adhering surface of the dressing sheet.

10 25. A kit comprising a dressing product according to any of claims 1-22 and a container containing a substance applicable to a surface portion of the first surface of the dressing patch.

26. A kit according to claim 25, wherein the substance comprises an ointment or cream.
